

New Series

DVNF!

Powerful | Plug & Play | High temperature resistant

NEW
 120°C

The new friend of the chef is called DVNF! The powerful roof fan not only convinces with its good performance but also with higher exhaust air temperatures of 120 °C. The integrated control of the fan provides the right amount of air at the right time, just when it is needed. This works, for example, with additional control options via a continuously variable or multi-level potentiometer* with which the power can be adapted to the demand at any time. Due to the coordinated combination with motor and electronics, very low energy consumption is possible.
